

Revolution in Mechanical Fixing of Stone

John Redhead has designed this simple and effective fixing system to expedite the mechanical fixing of stone to vertical surfaces. The Stoneclip is stainless steel, adjustable and comes with stainless steel fixings, relieving angles and vinyl packing washers to plumb uneven walls. A team of 2 men can typically install 3m² per hour using 1000 x 500 x 40mm stone. The time required to wait for tile adhesives to cure is eliminated. As with the recent reduction in the cost of natural stone products, the Stoneclip will reduce labour costs dramatically, increasing the volume of projects specifying stone clad buildings.

What's New? Polarstone from Haddonstone

This bright, very light grey colour will go with most cool schemes and looks terrific with stainless steel fittings. Trade price still only \$66.00 p/m².
